

A bar chart showing the distribution of 50 groups across two categories, represented by blue and red bars. The x-axis is labeled 'Group' and lists 50 categories, including various gene symbols and a final '(Intercept)' category. The y-axis represents the magnitude of the values, with a grid extending from 0 to 10. Each bar is topped with a black error bar. The blue bars generally show higher values than the red bars, especially for the first 30 groups. The '(Intercept)' category shows a very low value for both categories.
